DETAILED ACTION

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: **providing for fluid transfer from the storage chamber to the outflow chamber at a flow rate substantially equal to the flow rate out of the outflow chamber.**

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 112

Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The amendment filed 9/12/03 introduces new matter into the claims. 35 U.S.C. 132 states that no amendment shall introduce new matter into the claims of the invention. The added material which is not supported by the original disclosure is as follows: **providing for fluid transfer from the storage chamber to the outflow chamber at a flow rate substantially equal to the flow rate out of the outflow chamber.**

Applicant is required to cancel the new matter in the reply to this Office Action.

Response to Arguments

Applicant's arguments filed 9/12/03 have been fully considered but they are not persuasive.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., continuous delivery of drugs) are clearly shown in Arzbaeher. Simply, Arzbaeher device is a continuous flow delivery pump as long as there is fluid in the storage chamber (col. 5, lines 55-65). Once the storage chamber is empty the device will no longer continue to delivery fluid. Similarly, applicant device is a continuous flow delivery pump as long as there is fluid in the storage chamber as indicated on (page 6, last paragraph) of applicant's arguments. Further, the examiner has been unable find support for applicant's claim that his device provides continuous and uninterrupted delivery of fluid for days or weeks.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a device that provides continuous and uninterrupted delivery of fluid for days or weeks) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
